

Product specification

Induction type electronic gauge

Summary

Induction Electronic water gauge SCSW02 the use of advanced technology, adopt anticorrosion navy copper contact, stainless steel enclosure, internal use high performance sealing materials for special processing, products with antifreeze, heat resistant, anti-aging, lightning resistance, resistance to electromagnetic interference, etc. It can be used for water level measurement in road, water, river, lake, reservoir, hydropower station, irrigation area, waterworks, sewage treatment plant, tunnel and culvert.

Technical indicators

Range: 0-200cm, 40cm section splicing;

Precision: 1cm;

Power supply voltage: 12V;

Output signal: RS485;

Static current: less than 3mA;

Working temperature: 0~50 °C;

Relative humidity: no more than 95%;
